3887 Buyside could get tagged...

What am I looking for?

I want a sharp energetic run lower. Then a clear FVG to anticipate a short... that would likely deliver price under 3855.

Knowing how to enter is not enough.

You have to know how to manage the idea, once in it.

Stops are insurance... like Term Life Insurance. If you don't use it, get your money back & close the idea without a full loss.

Holding with "it has to pan out like I want", kills traders

If the trade idea is engaged and the conditions are High Volatility we use the swing High for stop loss.

If the FVG Premoum High or upper boundary is traded above Initially, this is permissible.

If it trades back above it after going under the Discount Low, this saves your stop

My Son wants to know how many understand what I was describing this morning and how many bought for a run to 3933.25?

Or are short from 3933.25?

Who sat still?

Not that I want you trading while we study Price together.

I said, and you can go back and verify...

The sellside is 3872 and 3855. I prefer and favor those.

I outlined the daily range as consolidation and walked you through how traders would try to use their day and hours in this profile.

I called 3933.25 & said they'd take it there

Now think...

When we stopped short of May 12 low, consolidated, failed to break lower, left Sellside in place all day... then lift it above the High...

What does this do?

Shorts give up Buyside to Short Sellers at a Higher Market Price.

Longs place Sell Stops under the lows. Who would benefit from this?
